PROJECT ELEMENTS

- anti-terrorism
- force protection
- lighting
- military
- security
- traffic calming
- transformer installation
- vehicle inspection

PROJECT OVERVIEW

The Lompoc Gate serves all vehicle traffic entering Vandenberg Air Force Base. Project upgrades were completed as part of Vandenberg's Anti-Terrorism/Force Protection program.

Concrete islands were installed in order to separate truck traffic and automobile traffic near existing guard inspection booth. Concrete islands diverted traffic to appropriate inspection lanes, increasing safety and minimizing inspection time by personnel conducting ID checks.

A new truck inspection canopy was constructed in order to facilitate proper

inspection of all truck traffic entering Vandenberg AFB.

Manually operated bollards were installed approaching Lompoc Gate in order to queue traffic and eliminate the need for concrete Jersey Barriers.

Area lighting was installed in vicinity of truck inspection canopy and guard inspection booths, among other improvements.

MNS provided Title II Construction Management for this project. MNS provided surveillance and inspection services during construction from the beginning of construction through the final acceptance by Vandenberg AFB.
