- Office Engineering

## PROJECT ELEMENTS

- ac paving
- concrete paving
- curbs and gutters
- earthwork
- grading
- on and off ramps
- retaining walls
- road realignment
- road widening
- signs
- traffic control
- utility relocation

## PROJECT OVERVIEW

MNS provided construction inspection for this \$25M major interchange project, undertaken by the City under Caltrans oversight.

The project consisted of the widening and construction of new on and off ramps on Route 5, widening the existing undercrossing, and realignment of existing streets and frontage roads adjacent to the freeway.

This included inspection of earthwork and grading, AC paving, concrete paving, reinforced concrete retaining walls, utility relocations and new installations, drainage systems, curb and gutter, overhead signs, MBGR, traffic control, and coordination with Caltrans and City staff.

Construction took place in multiple stages in order to better accommodate traffic flow throughout the duration of construction.

This was a Caltrans oversight project and we carried out construction inspection in strict accordance with Caltrans methods and procedures.
